

Assignment – 24.5

Name: Saisharan

Ht.no: 2303A51434

bt.no: 21

Task 1 – Environment Setup

- Create a free Replit account.
- Explore the mobile app development templates (React Native / Flutter / HTML5 hybrid).
- Install required packages or dependencies in the Replit environment.

Output screenshot:

Task 2 – Basic Mobile App

- Build a simple "Hello App" that displays:
 - o App Title
 - o User's Name (input field + button)
 - o Greeting message dynamically updated.
- Use AI assistance to generate boilerplate code and explain structure.

Output screenshot:

How the code is structured:

- **App.tsx** — the root component, sets up routing and global providers
- **HelloPage.tsx** — the main page with all the interactive logic using React's **useState** hook:
 - One state value tracks what's typed in the input
 - Another state value stores the submitted name
 - When you click the button (or press Enter), the submitted name updates, which re-renders the greeting instantly
- **index.css** — the design system with a clean indigo/purple color palette

The button is disabled when the input is empty, and the greeting fades in smoothly with a small animation each time it appears.

Task 3 – Adding Features with AI Assistance

- Enhance the app with:
 - Navigation bar (Home, About, Contact).
 - Form handling (e.g., user registration page).
 - Basic styling with CSS or React Native styles.
- Ask AI in Replit to add inline documentation for each function.

Output screenshot:

Task 4 – Testing on Mobile

- Run the app in Replit's mobile preview mode.
- Test responsiveness on different screen sizes.
- Fix UI alignment issues with AI suggestions.

Task 5 – Deployment

- Deploy the app using Replit hosting or export it to a mobile framework (like Expo for React Native).

- Share the deployment link with peers for testing.
